

2022 State of the Market Report for PJM

March 9, 2023

IMM

Monitoring Analytics

Market Monitoring Unit

- **Monitoring Analytics, LLC**
 - Independent company
 - Formed August 1, 2008
- **Independent Market Monitor for PJM**
 - Independent from Market Participants
 - Independent from RTO management
 - Independent from RTO board of managers
- **MMU Accountability**
 - To FERC (per FERC MMU Orders and MM Plan)
 - To PJM markets
 - To PJM Board for administration of the contract

Role of Market Monitoring

- **Market monitoring is required by FERC Orders**
- **Role of competition under FERC regulation**
 - **Mechanism to regulate prices**
 - **Competitive outcome = just and reasonable**
- **FERC has enforcement authority**
- **Relevant model of competition is not laissez faire**
- **Competitive outcomes are not automatic**

Role of Market Monitoring

- **Detailed rules required**
- **Detailed monitoring required:**
 - **Of participants**
 - **Of RTO**
 - **Of rules**
- **Market monitoring is primarily analytical**
 - **Adequacy of market rules**
 - **Compliance with market rules**
 - **Exercise of market power**
 - **Market manipulation**

Role of Market Monitoring

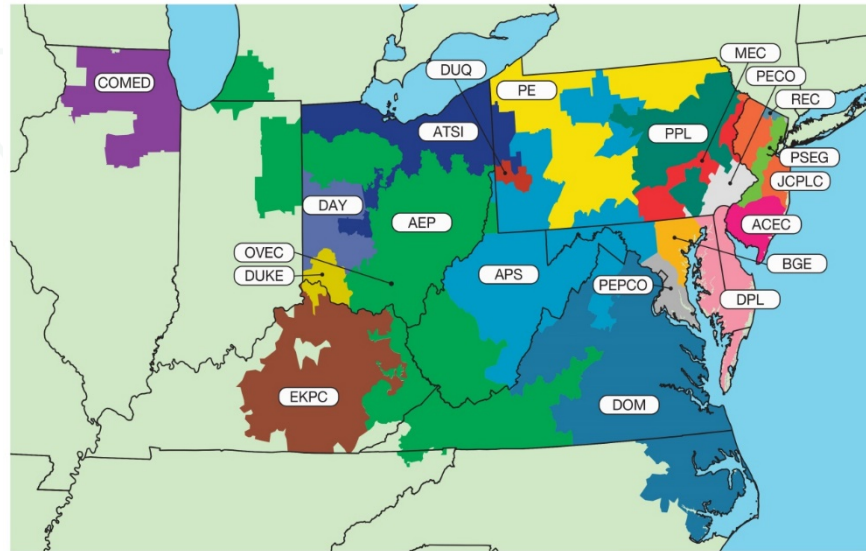

- **Market monitoring provides inputs to prospective mitigation**
- **Market monitoring provides retrospective mitigation**
- **Market monitoring provides information**
 - **To FERC**
 - **To state regulators**
 - **To market participants**
 - **To RTO**

Market Monitoring Plan

- **Monitor compliance with rules**
 - **Monitor the potential of market participants to exercise market power**
 - **Monitor for market manipulation**
- **Recommend changes to rules**
 - **Monitor actual or potential design flaws in rules**
 - **Monitor structural problems in the PJM market**
- **Report on market issues**
 - **State of the market reports**
 - **Other reports**

PJM

Legend

Allegheny Power Company (APS)	Duquesne Light (DUQ)
American Electric Power Co., Inc. (AEP)	Eastern Kentucky Power Cooperative (EKPC)
American Transmission Systems, Inc. (ATSI)	Jersey Central Power and Light Company (JCPLC)
Atlantic Electric Company (ACEC)	Metropolitan Edison Company (MEC)
Baltimore Gas and Electric Company (BGE)	Ohio Valley Electric Corporation (OVEC)
ComEd (COMED)	PECO Energy (PECO)
Dayton Power and Light Company (DAY)	Pennsylvania Electric Company (PE)
Delmarva Power and Light (DPL)	Pepco (PEPCO)
Dominion (DOM)	PPL Electric Utilities (PPL)
Duke Energy Ohio/Kentucky (DUKE)	Public Service Electric and Gas Company (PSEG)
	Rockland Electric Company (REC)

Total price of wholesale power

PJM summary statistics

	2021	2022	Percent Change
Average Hourly Load Plus Exports (MWh)	92,774	94,301	1.6%
Average Hourly Generation Plus Imports (MWh)	94,501	96,147	1.7%
Peak Load Plus Export (MWh)	151,680	149,531	(1.4%)
Installed Capacity at December 31 (MW)	186,593	183,385	(1.7%)
Load Weighted Average Real Time LMP (\$/MWh)	\$39.78	\$80.14	101.4%
Total Congestion Costs (\$ Million)	\$995.3	\$2,501.3	151.3%
Total Uplift Credits (\$ Million)	\$178.4	\$289.9	62.5%
Total PJM Billing (\$ Billion)	\$54.13	\$86.22	59.3%

The energy market results were competitive

Market Element	Evaluation	Market Design
Market Structure: Aggregate Market	Partially Competitive	
Market Structure: Local Market	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Effective

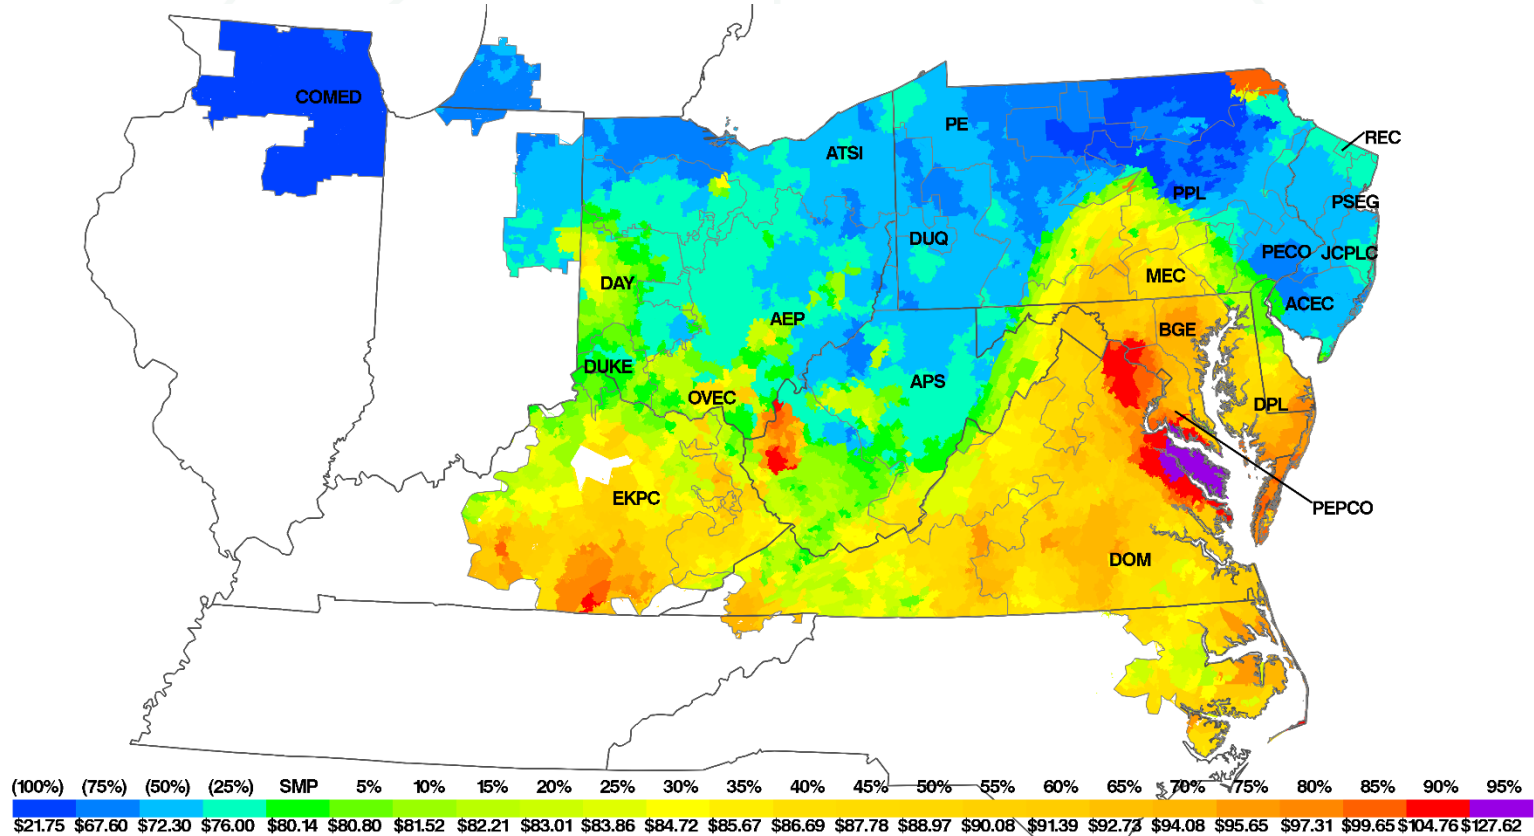

RT monthly and yearly load-weighted average LMP

Real-time load-weighted average LMP

	Real-Time Load-Weighted Average LMP			Year to Year Change			
	Average	Median	Standard Deviation	Average	Average Percent	Median	Standard Deviation
1998	\$24.16	\$17.60	\$39.29	NA	NA	NA	NA
1999	\$34.07	\$19.02	\$91.49	\$9.91	41.0%	8.1%	132.8%
2000	\$30.72	\$20.51	\$28.38	(\$3.34)	(9.8%)	7.9%	(69.0%)
2001	\$36.65	\$25.08	\$57.26	\$5.93	19.3%	22.3%	101.8%
2002	\$31.60	\$23.40	\$26.75	(\$5.06)	(13.8%)	(6.7%)	(53.3%)
2003	\$41.23	\$34.96	\$25.40	\$9.64	30.5%	49.4%	(5.0%)

Total	\$39.78	100.0%	\$80.14	100.0%	0.0%

Energy market price increase

- **The real-time load-weighted average LMP in 2022 increased 101.4 percent from the first nine months of 2021, from \$39.78 per MWh to \$80.14 per MWh.**
- **This is the highest average PJM price (\$80.14 per MWh), the highest price increase (\$40.36 per MWh) and the highest percent price increase (101.4 percent) for a year since the creation of PJM markets in 1999.**

Components of Increase in real-time load-weighted average LMP: 2022

Component	2021	2022	Increase in LMP	Percent
Fuel and Consumables	\$26.62	\$49.45	\$22.82	56.6%
Emission Related	\$1.40	\$5.11	\$3.71	9.2%
Market Power Related	\$5.59	\$10.42	\$4.83	12.0%
Scarcity	\$0.22	\$5.05	\$4.83	12.0%
Transmission Constraint Penalty Factor	\$3.31	\$4.63	\$1.31	3.2%
Ancillary Service Redispatch Cost	\$0.35	\$1.45	\$1.11	2.7%
Emergency Demand Response	\$0.00	\$1.75	\$1.75	4.3%
PJM Administrative Cap	\$0.00	(\$1.39)	(\$1.39)	(3.5%)
All Other	\$2.28	\$3.67	\$1.39	3.4%
Total	\$39.78	\$80.14	\$40.36	100.0%

Components of LMP increase

- **\$40.36 per MWh increase in the real-time load weighted average LMP**
- **\$22.82 per MWh (56.6 percent) was an increase in the fuel and consumables cost components of LMP**
- **\$3.71 per MWh (9.2 percent) was an increase in the emissions cost components of LMP**
- **\$4.83 per MWh (12.0 percent) was an increase in the sum of the markup, maintenance, and ten percent adder components of LMP**
- **\$4.83 per MWh (12.0 percent) was an increase in the scarcity component of LMP**
- **\$1.31 per MWh (3.2 percent) was an increase in the transmission constraint penalty factor component of LMP**

Recommendations: Energy Market

- **The day-ahead energy market must offer requirement equal to ICAP for capacity resources should be enforced.**
- **Fuel cost policies should be verifiable and enforceable. All resources should be required to follow their fuel cost policies at all times.**
- **The loopholes in offer capping implementation should be closed.**
- **Virtual bidding should be eliminated at nodes that aggregate only small portions of the transmission system.**

Recommendations: Energy Market

- **Major maintenance should not be included in cost-based offers**
- **PJM should not reduce line ratings in SCED to trigger transmission constraint penalty factor.**

Real-time daily load: 2021 and 2022

RT load and load plus exports

	PJM Real-Time Demand (MWh)				Year to Year Change

Average tier 1 REC price by jurisdiction

Renewable energy credits (RECs)

- **There should be a single PJM operated forward market for RECs, for a single product based on a common set of state definitions of renewable technologies, with a single clearing price, traded up to real time delivery.**
- **Only if states agree.**
- **Cleared separately from PJM energy market and PJM capacity market.**

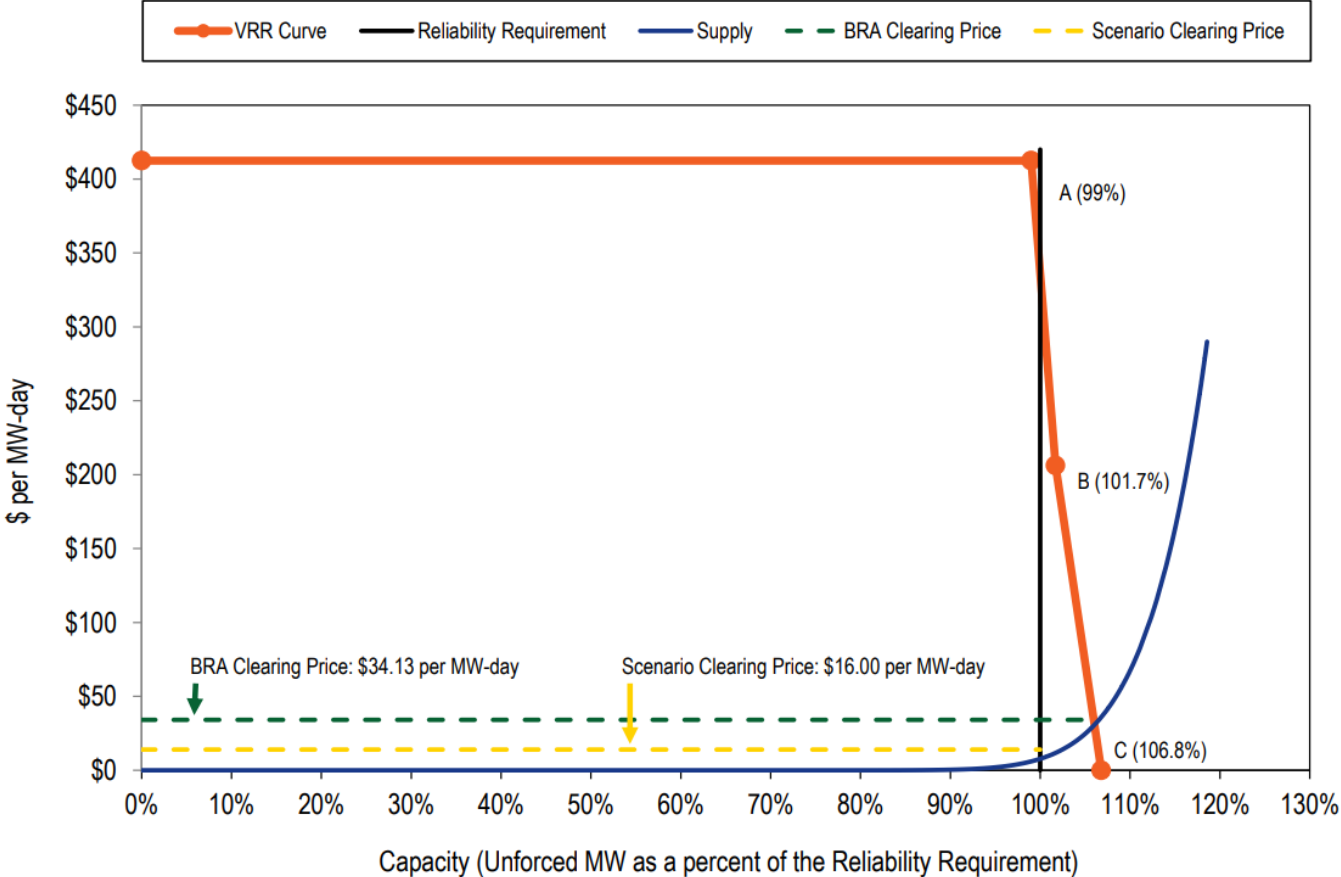

The capacity market results were competitive

Market Element	Evaluation	Market Design
Market Structure: Aggregate Market	Not Competitive	
Market Structure: Local Market	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Mixed

Capacity market issues

- **Capacity performance design**
- **Market seller offer cap**
- **Forward looking energy net revenue offset**
- **VRR curve shape and location**
- **Definition of capacity**
- **Intermittent capacity definition: ELCC**
- **DR/EE**
- **MOPR**
- **Reserve margin**

Projected reserve margin	22.9%	24.0%	24.2%	20.4%	20.4%	22.2%	$U=(H-T)/(1-E))/J-1$

Reserve margin

- **Total reserves: 24,792.3 MW**
- **Required reserves: 16,957.0**
- **Excess reserves: 7,835.3**
- **Cleared DR: 8,203.3 MW**
 - **104.7 percent of excess reserves**
- **Cleared capacity with no must offer requirement: 7,534.3 MW**
 - **96.2 percent of excess reserves**
- **Sum of DR and no must offer: 15,737.6 MW**
 - **92.8 percent of required reserves**
 - **63.5 percent of total reserves**
- **Total capacity with no must offer requirement: 17,037.1 MW**

Reliability and Markets: Issues

- **Apparent excess reserves are not robust**
 - **Coal retirements (environmental/not economics)**
 - **Uncertainty about new capacity: renewables and gas**
- **Solution is to focus on reinforcing the fundamentals of the capacity market: reliable price signals**
 - **Aggregate**
 - **Locational**
- **Solution is not one off tweaks to capacity market parameters**
- **Solution is not to weaken market power mitigation rules (PJM's MSOC proposal weakens mitigation).**
- **Prices were not too low in 2023/2024 BRA.**

Capacity market basics

- **The capacity market is a competitive mechanism that exists to make the energy market work.**
- **What are the essential, realistic, implementable elements of a capacity market design?**

Reliability and Markets: Issues

- **Correcting/defining the role/obligations of demand response resources is key to a workable capacity market.**
 - **Should look like any other supply side resource.**
 - **Economic resource. Not emergency resource.**
 - **Must offer in energy market.**
 - **Offer caps and same rules for all offers.**
 - **Must be available.**
- **Potential issues for PJM system control and markets if DER follows the demand response model.**
- **Role/obligations of energy efficiency (EE) resources.**
 - **EE should not be part of capacity market per PJM rules.**

Map of unit retirements: 2011 through 2026

Recommendations: Planning

- **Modify the transmission project proposal templates to include data necessary to perform a detailed project lifetime financial analysis.**
- **All PJM transmission owners should use the same line rating method and implement dynamic line ratings (DLR), subject to NERC standards and guidelines, subject to review by NERC, PJM and the MMU, and approval by FERC.**
- **The market efficiency process should be eliminated. If retained, the cost/benefit calculation for economic projects needs to be corrected.**
- **MMU comments on transmission planning NOPR**

Recommendations: Energy Market Uplift

- **PJM should ensure that units not following dispatch are not paid uplift.**
- **CTs should not be defined to be always following dispatch.**
- **Flexible operating parameters should be required as a condition for receiving uplift.**
- **Uplift should not be paid to units backed down for reliability because there is no lost opportunity.**
- **Uplift should not be paid to units based on a fuel they are not burning.**
- **Uplift should not be paid to units on outage.**

PJM's footprint and its external scheduling interfaces

Scheduled import and export transaction volume history

The regulation market results were not competitive

Market Element	Evaluation	Market Design
Market Structure	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Not Competitive	Flawed

The synchronized reserve market results were competitive: October through December, 2022

Market Element	Evaluation	Market Design
Market Structure: Regional Markets	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Effective

The 30 minute reserve market results were competitive: October through December, 2022

Market Element	Evaluation	Market Design
Market Structure	Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Effective

Adopted Recommendations: Reserve Markets

- **Removal of \$7.50 per MWh margin and variable operations and maintenance costs for synchronized reserve offers.**
- **Removal of tier 1 reserve payment triggered by a nonzero nonsynchronized reserve price.**
- **Enforcement of a synchronized reserve must offer requirement.**
- **Removal of DGP adjustment to reserve clearing.**
- **Termination of VACAR reserve sharing agreement**
- **Real-time obligation for day-ahead 30 minute reserves**
- **Opportunity cost basis for 30 minute reserve offers**

Primary reserve MW by source

Recommendations: Ancillary Services

- **The regulation market should be modified to incorporate a consistent application of the marginal benefit factor (MBF) throughout the optimization, assignment and settlement process.**
- **LOC should be based on actual unit ramp rates. Current LOC overstated significantly.**
- **Separate cost of service payments for reactive capability should be eliminated and the cost of reactive capability recovered in the capacity market.**
- **New CRF rates for black start units, incorporating current tax code changes, should be implemented immediately for all black start units.**

The FTR/ARR markets results were partially competitive

Market Element	Evaluation	Market Design
Market Structure	Competitive	
Participant Behavior	Partially Competitive	
Market Performance	Partially Competitive	Flawed

Recommendations: FTR/ARR

- **Rights to all congestion revenues should be assigned to load.**

Total congestion offset for load
