Monitoring Analytics

FTR Funding: 2005 through June 2014

Target Allocation Compared to Sources of Positive and Negative Congestion Revenue

MMU Proposed Options

- 1. Report correct monthly payout ratios
- 2. Eliminate portfolio netting subsidizations
- 3. Eliminate counter flow FTR subsidizations
- 4. Eliminate cross geographic subsidies
- 5. Improve outage modeling in FTR auctions
- 6. Reduce FTR availability on persistently revenue inadequate paths/facilities
- 7. Implement seasonal ARR and FTR allocation methods
- 8. Eliminate over allocation of Stage 1A ARRs

Reporting of Payout Ratio

- The monthly payout ratio is not accurately reported
 - Uses EOPP calculation instead of revenue actually available
 - Should use negative target allocations as a source of revenue, raising the monthly payout ratio
- This will not effect funding levels, but is a simple reporting issue to gauge the true level of funding in a month.

FTR Revenue Adequacy

	Reported Monthly Payout Ratio	Actual Monthly Payout Ratio
Jun-13	78.3%	79.5%
Jul-13	88.8%	89.3%
Aug-13	94.1%	94.7%
Sep-13	57.5%	61.0%
Oct-13	74.1%	76.2%
Nov-13	66.9%	69.1%
Dec-13	73.3%	74.9%
Jan-14	78.1%	78.9%
Feb-14	69.0%	70.7%
Mar-14	66.8%	68.1%
Apr-14	54.2%	55.3%
May-14	57.6%	62.0%
Jun-14	100.0%	100.0%

7

Elimination of Portfolio Netting

- Hourly and EOPP uplift calculation is net of positive and negative target allocations
- Participants with less negative target allocations subsidize those with more, treating positive target allocation FTRs differently depending on participant's portfolio

Elimination of Portfolio Netting

- Subsidization can be eliminated by applying payout ratio to ONLY positive target allocation first, then netting
- This was discussed in the 2011 FTR Task Force and received the following votes on its own, but package was voted down
 - Vote results: 33 No, 40 Maybe, 43 Yes

Monitoring Analytics

Portfolio Netting Example

	Po	ositive TA P	ayout				
Reported		;	39.1%				
Current Act	ual	4	41.7%				
Per FTR Ad	ctual	(61.1%				
Participant	Positive Target Allocation	Negative Target Allocation	Percent Negative Target Allocation	Net TA	FTR Netting Payout (Current)	No Netting Payout (Proposed)	Percent Change
1	\$60.00	(\$40.00)	66.7%	\$20.00	\$8.33	(\$3.33)	(140.0%)
2	\$30.00	\$0.00	0.0%	\$30.00	\$12.50	\$18.33	46.7%
3	\$90.00	(\$20.00)	22.2%	\$70.00	\$29.17	\$35.00	20.0%
4	\$0.00	(\$5.00)	100.0%	(\$5.00)	(\$5.00)	(\$5.00)	0.0%
Total	\$180.00	(\$65.00)	-	\$115.00	\$45.00	\$45.00	-

FTR Netting Payout = Net TA * Current Actual = 20 * 0.417

No Netting Payout = (Positive TA * Per FTR Actual) + Negative TA = (60 * 0.611) + (-40)

No Portfolio Netting Payout Ratio

	Net	Per	FTR	Congestion	Current Available	Per FTR A
Owner	Net TA	Positive TA	Negative TA	\$45.00	\$50.00	Ş
1	\$20.00	\$60.00	(\$40.00)			
2	\$30.00	\$30.00	\$0.00		Positive TA Pag	yout
3	\$70.00	\$90.00	(\$20.00)	Reported	39	9.1%
4	(\$5.00)	\$0.00	(\$5.00)	Current Actual	41	.7%
Total	\$115.00	\$180.00	(\$65.00)	Per FTR Actual	61	.1%
	-					

- Four FTR holders with a total net of \$115 in target allocations
- Total Positive Target Allocations of \$180, owed to positive TA holders
- Total Negative Target Allocations of \$65, paid to positive TA holders
- \$45 in congestion
- Per FTR Available = \$45 + \$65 = \$110
- Payout Ratio = \$180/\$110 = 61.1%

Earlier Proposals

- Previous FTR Task Force discussions on balancing congestion reallocation yielded negative results
- Previous discussions on the elimination of portfolio netting were positively received

Funding	7E	Fund FTRs from Day-Ahead Congestion dollars only. The entities charged/credited for Balancing congestion would need to be determined.	FTRs would be funded from day-ahead congestion and auction revenues minus ARR credits. Balancing Congestion which is usually negative would not be used to fund FTRs. The entities charged/credited for Balancing congestion would need to be determined.	77	11	28
Funding	7F	Change end of year uplift and hourly calculation to include all positive target allocations and do not allow negative target allocations to offset positive target allocations within a members portfolio	This would change the hourly and uplift FTR payout calculation so that negative target allocations within a members portfolio cannot be used to offset positive target allocations. Overall funding percentage would be equal among all members. Sell offers would still be able to offset Buy bids within a members portfolio.	33	40	43

Monitoring Analytics

Counter Flow FTR Payout Adjustment

- Counter flow FTRs and prevailing flow FTRs are not treated the same
- Current rules insulate counter flow FTRs from any revenue deficiencies, while prevailing flow FTRs have no insulation available
- The payout ratio should be calculated to split revenue deficiencies evenly among all FTRs, counter flow or prevailing flow

Negative Target Allocation Counterflow FTRs

If the Total Transmission Congestion Charge is a positive value that is less than the total positive FTR Target Allocation for the hour, then the Transmission Congestion Credit for each market participant is equal to that market participant's FTR Target Allocation multiplied by the Total Transmission Congestion Charge and divided by the Total PJM positive FTR Target Allocations if the market participant's FTR Target Allocation is a positive value, and is *equal to 100% of the market participant's FTR Target Value*. Each market participant's hourly Congestion Credit Deficiency is calculated as its FTR Target Allocation minus its hourly Transmission Congestion Credit.

Elimination of Stage 1A Over Allocation Requirement

- Current rules present scenarios where revenue inadequacy is guaranteed
- The ability to prorate Stage 1A ARR allocations to physical facility limits will eliminate this known, preventable revenue inadequacy

Revenue Inadequacy Due to Stage 1A ARR Over Allocations

Geographic Cross Subsidies

- FTRs are not paid on a path specific basis, so geographic subsidies are unavoidable
- Zones with excess funding face the same level of FTR funding as the entire FTR market, resulting in zones with excess funding subsidizing zones with a funding deficit

Geographic Subsidization

Geographic Subsidization and Balancing Congestion

Geographic Subsidization Day-Ahead Only Congestion

www.monitoringanalytics.com

Improved Outage Modeling

- Deficiencies in outage modeling, especially in the Annual and Long Term FTR Auctions, negatively impact FTR funding
- Selling capacity above what is physically available results in a funding deficit
- The length of these auctions make it difficult to accurately predict where and when outages will occur

Impacts of Outage Modeling

MIC Market Operations Report, February 2014.

Website: http://www.pjm.com/~/media/committees-groups/committees/mic/20140305/20140305-item-12a-report-on-market-operations.ashx

Persistently Revenue Inadequate Pathways

- Facilities, and the paths they impact, that are persistently revenue inadequate can be easily identified
- Adjusting the limits on these facilities in the auction models can prevent over selling of the associated FTRs, reducing revenue inadequacies
- Clear guidelines on how and when these facilities will be selected and limited must be established

Seasonal ARR/FTR Allocation

- More granular ARR allocations and FTR auctions would allow more accurate outage modeling
- Done during one clearing period, or throughout the year using average facility limits for the given season
- Allows use of shorter outage periods for better allocation/auction modeling
