## 2016 State of the Market Report for PJM

MC Special Session March 23, 2017 Joe Bowring

## **Market Monitoring Unit**

- Monitoring Analytics, LLC
  - Independent company
  - Formed August 1, 2008
- Independent Market Monitor for PJM
  - Independent from Market Participants
  - Independent from RTO management
  - Independent from RTO board of managers
- MMU Accountability
  - To FERC (per FERC MMU Orders and MM Plan)
  - To PJM markets
  - To PJM Board for administration of the contract

## **Role of Market Monitoring**

- Market monitoring is required by FERC Orders
- Role of competition under FERC regulation
  - Mechanism to regulate prices
  - Competitive outcome = just and reasonable
- FERC has enforcement authority
- Relevant model of competition is not laissez faire
- Competitive outcomes are not automatic
- Detailed rules required

## **Role of Market Monitoring**

- Detailed monitoring required:
  - Of participants
  - Of RTO
  - Of rules
- Market monitoring is primarily analytical
  - Adequacy of market rules
  - Compliance with market rules
  - Exercise of market power
  - Market manipulation

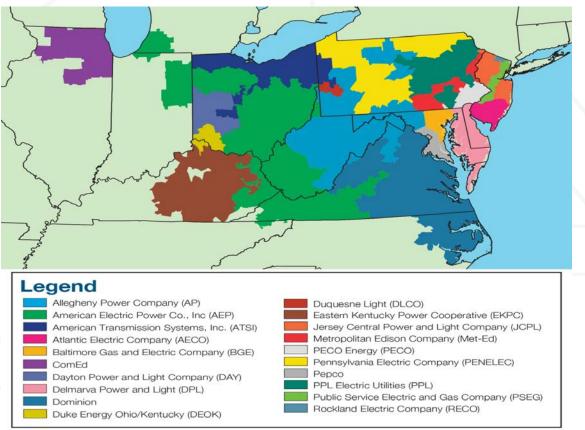

## **Role of Market Monitoring**

- Market monitoring provides inputs to prospective mitigation
- Market monitoring provides retrospective mitigation
- Market monitoring provides information
  - To FERC
  - To state regulators
  - To market participants
  - To RTO

## **Market Monitoring Plan**

- Monitor compliance with rules.
- Monitor actual or potential design flaws in rules.
- Monitor structural problems in the PJM market.
- Monitor the potential of market participants to exercise market power.
- Monitor for market manipulation.

## PJM's footprint and its 20 control zones

## The energy market results were competitive

Market Element	Evaluation	Market Design
Market Structure: Aggregate Market	Competitive	
Market Structure: Local Market	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Effective

#### **Recommendations: Energy Market**

- Cost based offers equal to short run marginal cost
  - Replace Manual 15 with clear definitions for costbased offers
  - Fuel cost policies: algorithmic, verifiable, systematic
- Local market power mitigation improvements (TPS)
  - Constant markup on price and cost based offers
  - Cost based offer with same fuel as price based offer
  - PLS parameters at least as flexible as price based offer

#### **Recommendations: Energy Market**

- OEM parameters from CONE unit should be used for performance assessment and uplift
- Define explicit rules related to use of transmission penalty factors in setting LMP.

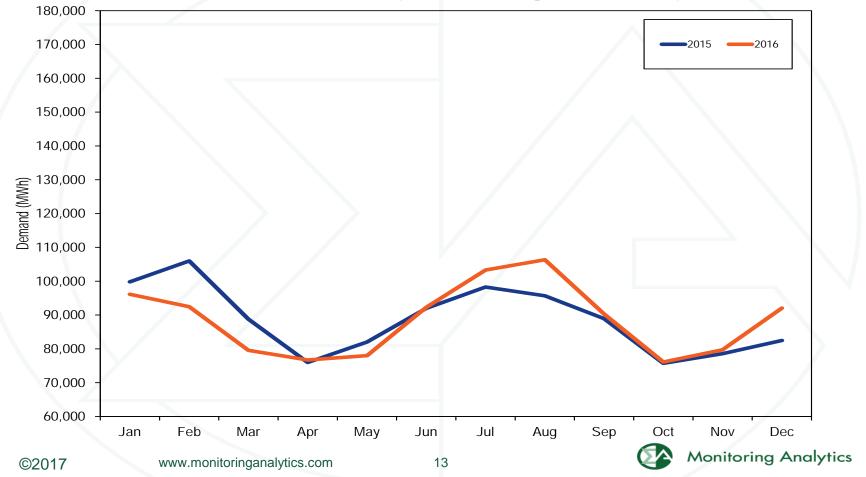

## Total price per MWh by category: 2015 and 2016

			2015 Percent of		2016 Percent of	Percent Change
Category	2015	\$/MWh	Total 2016	\$/MWh	Total	Totals
Load Weighted Energy		\$36.16	63.6%	\$29.23	58.5%	(19.2%)
Capacity		\$11.12	19.6%	\$10.96	21.9%	(1.5%)
Transmission Service Charges		\$7.09	12.5%	\$7.81	15.6%	10.1%
Transmission Enhancement Cost Recovery		\$0.51	0.9%	\$0.52	1.0%	2.1%
PJM Administrative Fees		\$0.44	0.8%	\$0.45	0.9%	2.5%
Reactive		\$0.37	0.7%	\$0.39	0.8%	4.9%
Energy Uplift (Operating Reserves)		\$0.38	0.7%	\$0.17	0.3%	(54.8%)
Regulation		\$0.23	0.4%	\$0.11	0.2%	(53.2%)
Transmission Owner (Schedule 1A)		\$0.09	0.2%	\$0.09	0.2%	3.8%
Black Start		\$0.08	0.1%	\$0.08	0.2%	8.8%
Day Ahead Scheduling Reserve (DASR)		\$0.10	0.2%	\$0.07	0.1%	(24.4%)
Synchronized Reserves		\$0.11	0.2%	\$0.05	0.1%	(53.5%)
NERC/RFC		\$0.03	0.1%	\$0.03	0.1%	3.0%
Load Response		\$0.02	0.0%	\$0.01	0.0%	(38.9%)
Non-Synchronized Reserves		\$0.02	0.0%	\$0.01	0.0%	(48.3%)
RTO Startup and Expansion		\$0.01	0.0%	\$0.00	0.0%	(43.4%)
Transmission Facility Charges		\$0.00	0.0%	\$0.00	0.0%	(59.2%)
Capacity (FRR)		\$0.13	0.2%	\$0.00	0.0%	(100.0%)
Emergency Load Response		\$0.00	0.0%	\$0.00	0.0%	(100.0%)
Emergency Energy		\$0.00	0.0%	\$0.00	0.0%	0.0%
Total Price		\$56.88	100.0%	\$49.99	100.0%	(12.1%)

#### The capacity market results were competitive

Market Element	Evaluation	Market Design
Market Structure: Aggregate Market	Not Competitive	
Market Structure: Local Market	Not Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Mixed

#### **Recommendations: Capacity Market**

- Implement a MOPR for existing units
- All capacity imports should be deliverable to an LDA
- Consistent definition of a capacity resource as physical at time of auction and delivery year.
- Definition of LDA should be dynamic and market based.
- Net revenue calculation for Net CONE should reflect actual flexibility of reference technology.

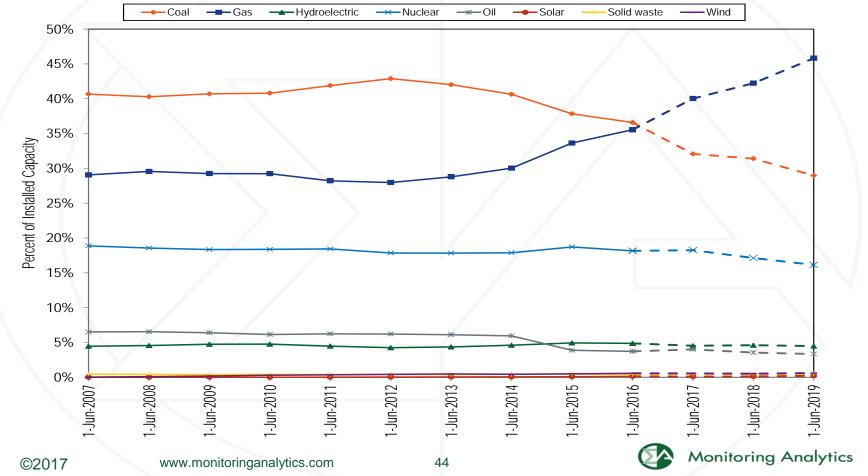

#### **Recommendations: Capacity Market**

- Net revenue calculation for offer caps should be based on lower of price or cost.
- Improve market clearing rules by including make whole and nesting in optimization.
- Maintain performance incentives and product definitions in Capacity Performance design.

#### PJM unit retirements: 2011 through 2020

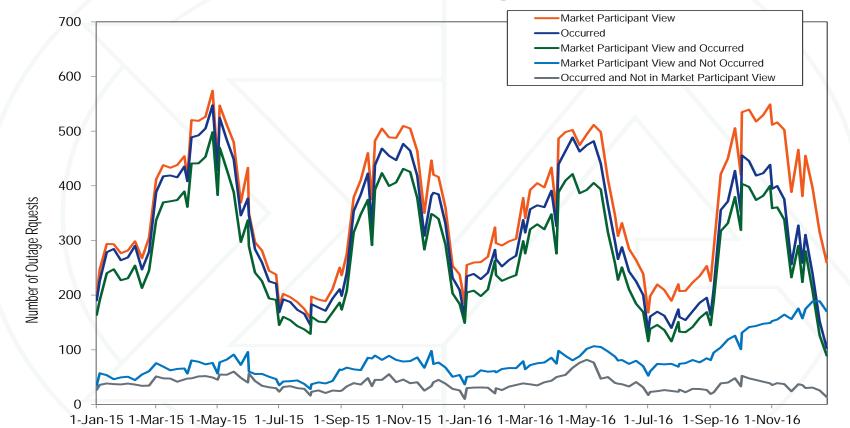

#### Approved or active TX outage requests

#### Day-ahead market model TX outages

#### Approved or active TX outage requests

#### Recommendations: Energy Market Uplift

- PJM should not use closed loop interfaces to override LMP logic to accommodate:
  - Issues with DR product, e.g. non nodal.
  - Issues with reactive power modeling.
  - Issues with scarcity pricing, e.g. not locational.
- PJM should not use price setting logic to override LMP logic to reduce uplift.

#### Recommendations: Energy Market Uplift

- Disclose units receiving uplift
- Eliminate day-ahead uplift.
- Include regulation net revenue offset in uplift calculation.
- UTCs should pay uplift.
- Eliminate use of IBTs in calculating deviations.

#### **PJM Closed loop interfaces**

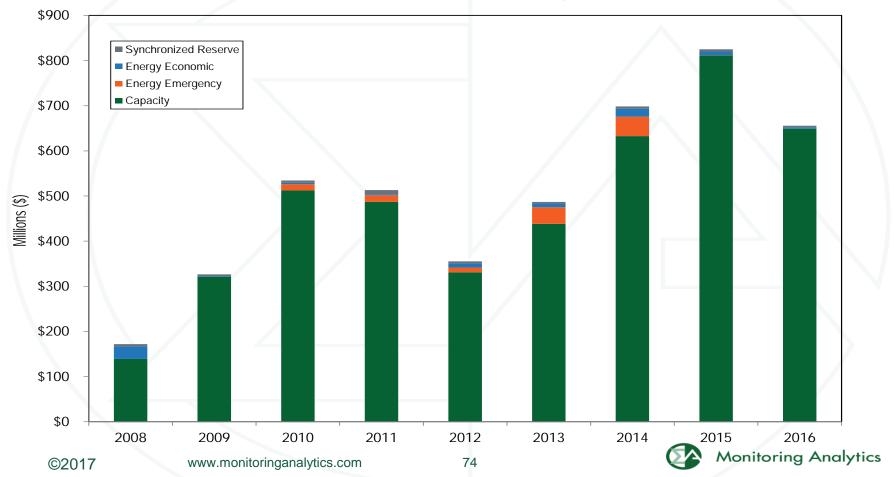

#### **Recommendations: Demand Response**

- Demand response should be removed from PJM capacity market.
  - Redesign to facilitate customers' response to prices
- Eliminate guaranteed DR strike price; pay LMP
- Demand response should be fully nodal
  - Compliance across zones should be eliminated
- M&V: cap baselines at PLC uniformly
- Eliminate net benefits test
  - Pay (LMP retail generation rate)
- Eliminate bankrupt customers from program

Economic program credits and MWh by

#### Demand response revenue by market

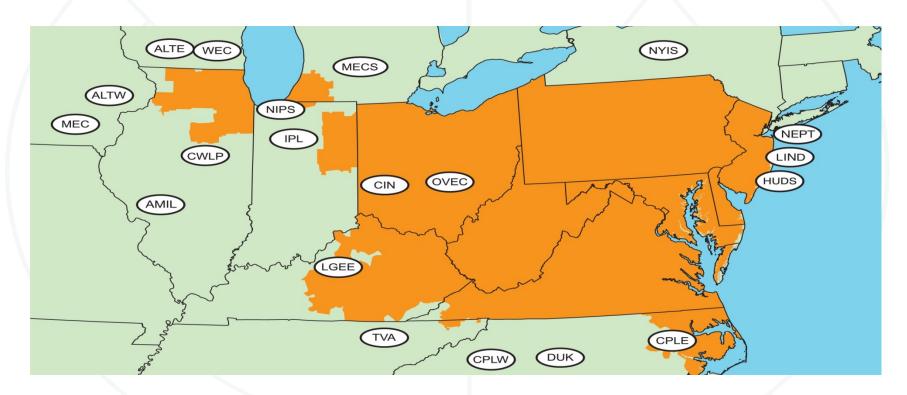

#### **Recommendations: Transactions**

- Submit transactions consistent with power flow not scheduled paths.
- Implement rules to prevent breaking up transactions to evade rules.
- Implement rules to prevent sham scheduling.
- Eliminate outdated definitions of interface pricing points.

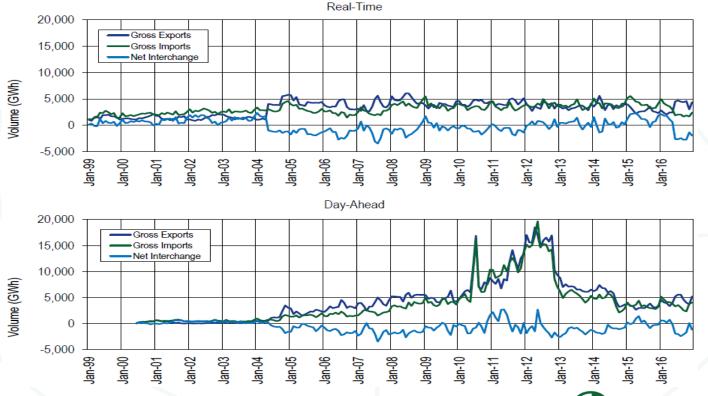

#### **Recommendations: Transactions**

- Permit unlimited spot imports.
- Interchange pricing should reflect LMP logic.
  - No need for scheduling physical transactions.
- Make actual flow data available for eastern interconnection to MMUs and RTOs/ISOs.

### PJM's footprint and its external day-ahead and real-time scheduling interfaces

# PJM real-time and day-ahead scheduled import and export transaction volume

©2017

# The Regulation Market results were competitive

Market Performance	Competitive	Mixed

#### **Recommendations: Ancillary Services**

- Regulation market should incorporate consistent application of marginal benefit factor including optimization, assignment and settlements.
- LOC should be based on unit's operating schedule in the energy market.
- Eliminate payment of Tier 2 price to Tier 1 when non-synchronized reserve price > 0.

#### **Recommendations: Ancillary Services**

- Eliminate DASR Market.
- The cost of reactive capability should be incorporated in the capacity market.
- Implement rules governing tier 1 biasing.

#### Average price and cost of PJM regulation

	Weighted Regulation	Weighted Regulation	Regulation Price as
Year	Market Price	Market Cost	Percent Cost
2009	\$22.99	\$30.68	74.9%

# The FTR Auction Markets results were competitive

Market Element	Evaluation	Market Design
Market Structure	Competitive	
Participant Behavior	Competitive	
Market Performance	Competitive	Flawed

#### **Recommendations: FTR/ARR**

- ARR/FTR design should be modified to ensure that all congestion revenues are returned to load.
- All FTR auction revenues should be returned to load.
- Eliminate use of 1998 generation to load contract paths for allocating ARRs.
- Eliminate portfolio netting.
- Apply FTR forfeiture rule to UTCs.

### ARR and FTR total congestion offset (\$M) for ARR holders
