The PJM Bill Does Not Include the Amount of Congestion Paid

- **PJM Bill includes:**
  - **Charges to load based on LMP**
  - **Credit to generation based on LMP**
  - **Charges to load based on CLMP**
  - **Credits to generation based on CLMP**
  - **CLMP indicates whether the LMP paid or credited is higher or lower than the reference bus price.**
  - **Nothing less. Nothing more.**
- **The PJM bill does not include the amount of congestion paid by the participant.**

Monitoring Analytics

The PJM Bill Does Not Include the Amount of Congestion Paid

- **Customer A has 1 MW of load. LMP of $15, CLMP of $10.**
- **Customer A paid $10 in CLMP related charges**
- **Customer A paid $5 in system energy (SMP) related charges**
- **Customer A has a total energy bill of $15**

	Load MW	Gen MW	CLMP Load Charges	CLMP Gen Credits	Net Energy Charges (SMP)	Total Bill
Customer A	1	0	$5	$0	$10	$15

- **How much congestion did Customer A pay?**
  - **Cannot tell from the PJM bill.**

Monitoring Analytics

The PJM Bill Does Not Include the Amount of Congestion Paid

- **Self supply through resource ownership or contract will affect the PJM bill but not the congestion paid.**

Monitoring Analytics

The PJM Bill Does Not Include the Amount of Congestion

- **Customer A has 1 MW of load and 2 MW of generation. LMP of $15, CLMP of $10.**

- **Customer A paid $10 in CLMP related charges and was credited $20 in CLMP related charges.**

- **Customer A paid $5 in energy (SMP) related charges and was credited $10 in energy (SMP) related charges**

- **Customer A Customer A is charged $15 for energy and credited $30 for energy, Net -$15.**

	Load MW	Gen MW	CLMP Load Charges	CLMP Gen Credits	Net Energy Charges (SMP)	Total Bill
Customer A	1	2	$5	$10	($10)	($15)

- **How much congestion did Customer A pay?**
  - **Cannot tell from the PJM bill.**

- Congestion is the difference between what load pays and generation is paid.
- Congestion is known from the information provided.
- If the information is the result of a security constrained optimization, the components of LMP and the load and gen MW at A, B and C and who owns the load or gen does not affect the amount of congestion paid.

- LMP is a result of the optimization solution
- CLMP is defined relative to the reference bus.
- PJM uses a load weighted reference bus
- The LMP at load weighted reference bus= SMP
- SMP = load weighted average price to load

- + CLMP indicates LMP higher than SMP
- - CLMP indicates LMP lower than SMP

The PJM Bill Does Not Include the Amount of Congestion Paid

- **The following examples show a two bus model with 2 generators and 2 load serving entities at each bus.**

- **The examples show that the components of LMP change with a change in the reference bus, but the congestion collected from each LSE is not affected by changes in the reference bus.**

- **The examples show that the components of the PJM bill will change with the reference bus, but the total charges or credits to each LSE or generator will not change.**

Monitoring Analytics

The PJM Bill Does Not Include the Amount of Congestion Paid

- **The examples show that ownership of generation resources at either bus will change an LSE's PJM bill but will not change the amount of congestion paid by that LSE.**

- **Self supply affects the PJM bill but does not affect the congestion paid by an LSE.**

- **The examples show that congestion is the difference between what load is paying for energy and payments to generation that serves that load through network service.**
